Sivateja Varma Jampana

+91 8977545498 | jampanasivatejavarma@gmail.com

Professional Summary

Software Engineer with a Bachelor of Technology in Computer Science (15 years full-time education) and strong proficiency in Python and its frameworks (Django, FastAPI). Experienced in the full software development life cycle, designing scalable RESTful APIs, and collaborating in agile team environments to translate requirements into technical solutions. Adept at writing clean, efficient, and well-documented code, with hands-on experience utilizing cloud platforms (AWS), containerization (Docker), and front-end technologies.

Education

Gandhi Institute of Technology and Management (GITAM) Visakhapatnam, India
Bachelor of Technology in Computer Science and Engineering *Aug. 2021 – May 2025*

Experience

Software Developer Intern May 2025 – October 2025
GYT workz *Hyderabad, India*

- Leveraged strong problem-solving skills in Python to design an AI-driven, real-time computer vision application evaluating drone-captured footage.
- Optimized frame processing pipelines for performance using grayscale conversion and adaptive thresholding.

Extracurricular Activities

Placement Coordinator & Marketing Team Member Aug. 2022
Career Guidance Center (GCGC) & ISTE Group *Visakhapatnam, India*

- Worked closely with cross-functional teams to oversee placement activities, facilitating clear communication and gathering technical requirements from recruiting companies.

Projects

E-Commerce Microservices Platform | *Python, FastAPI, Redis, Redis Streams, React.js* 2026

- Architected an event-driven microservices backend decoupling Payment and Inventory domains using FastAPI and Redis.
- Implemented asynchronous, cross-service communication utilizing Redis Streams and Consumer Groups, ensuring reliable message delivery and preventing duplicate order processing.
- Engineered a resilient fault-tolerance mechanism (compensating transactions) that automatically triggers a stream-based refund workflow if inventory allocation fails post-payment.
- Utilized FastAPI Background Tasks for non-blocking payment processing, reducing API latency and improving user experience.
- Developed a responsive frontend using React to interface with the decoupled backend services via RESTful APIs.

Developer Car API | http://32.236.44.143/ |*Python, FastAPI, React, PostgreSQL, Git, Docker, AWS* May 2026

- Designed, developed, and maintained a Python-based RESTful API serving as a public developer tool, participating in the full software development life cycle from concept to deployment.
- Integrated front-end technologies (React, HTML, CSS, JavaScript) with a scalable backend architecture utilizing PostgreSQL and JWT-based authentication.
- Ensured code quality by conducting code reviews and managing the codebase via version control systems (Git), subsequently containerizing the application with Docker for deployment on AWS EC2.

Parking Space Detection System | *Python, OpenCV, AI/Computer Vision* 2024

- Leveraged strong problem-solving skills in Python to design an AI-driven, real-time computer vision application evaluating drone-captured footage.
- Optimized frame processing pipelines for performance using grayscale conversion and adaptive thresholding.

Technical Skills

Programming & Front-End: Python, JavaScript, HTML, CSS, SQL
Frameworks & Libraries: FastAPI, React, OpenCV
Databases & Systems: PostgreSQL, MySQL, Relational Databases
Cloud & DevOps: AWS (EC2), Docker (Containerization), Git (Version Control), Railway
Core Competencies: RESTful API Design, Unit Testing, Debugging, Code Optimization
